Москва, 2018 г.

Задание

- создание двумерных динамических массивов;
 - обработка матриц;
 - форматированный вывод матриц на экран;
 - использование файлов для хранения матриц (на примере приведенной ниже программы сортировки строк матрицы);
 - передача двумерных массивов в функцию через параметры;
 - доступ к элементам матрицы через указатели и с помощью индексов;
 - освоение технологии структурного программирования (разобрать и выполнить приведенную в описании работы программу сортировки строк матрицы).
- Планируемое время выполнения работы - 6 часов.

Разработка алгоритма

Входные переменные:

- 1) int iNumColumns – количество столбцов в матрице;
- 2) int iNumLines – количество строк в матрице;
- 3) int iOutputOption – тип вывода на экран(fixed/scientific);
- 4) int iNumBeforeDot – количество знаков до запятой;
- 5) int iNumAfterDot – количество знаков после запятой;
- 6) double **dMatrix – матрица;
- 7) int x – переменная для нахождения элемента ij матрицы $A(x = 1)$;
- 8) int fact – подсчет факториала;
- 9) const int iMatrixsize – размер матрицы B;
- 10) double B[][] – статическая матрица.

Функции:

- 1) void print – вывод матрицы на экран с возможностью выбора типа вывода;
 - a. *Входные переменные:*
 - i. double **dMatrix – матрица;
 - ii. int iOutputOption – тип вывода на экран (fixed/scientific);
 - iii. int iNumBeforeDot – количество знаков до запятой;
 - iv. int iNumAfterDot – количество знаков после запятой;
 - v. int iNumLines – количество строк;
 - vi. int iNumColumns – количество столбцов.
 - b. *Локальные переменные:*
 - i. int iColumn – номер текущего столбца;
 - ii. int iNumLength – длина слова (нужно для setw);
 - iii. int iNumColumnsInRow – количество столбцов в строке;

4	Вывод адресов и результатов	<div>010FF440 010FF500 010FF490 010FF558 1 30 20 40 31 2 20 13 10</div>																																																																																																																																																																																																																																																																																																																																				

В этой работе мы научились выводить матрицу двумя способами, передавать статическую двумерную матрицу в функцию с помощью дополнительного массива, находить адреса и значения через указатели.
